

AnMed Health serves as an economic engine for Anderson and the surrounding region while also working toward improving the community in other ways. Community benefit activities are discretionary, benevolent efforts that advance public education, promote the general welfare and enhance the overall quality of community life. Community benefits include activities such as providing financial assistance to uninsured and underinsured patients and subsidizing reimbursements from Medicare and Medicaid, which do not cover the cost of providing health services. Community benefit also includes other vital services that do not pay for themselves such as behavioral health, community health improvements, community building activities and community health clinics. Finally, it accounts for the value of employees' community service efforts in a wide variety of civic, charitable and professional endeavors.

As giving back is our privilege, we are pleased to report that the value of AnMed Health community benefit during 2018 was \$93,890,327.
